Re: Hazardous Waste Compliance Inspection of July 29, 1986
EPA ID. No. KSD000203638

Dear Mr. Dame:

Thank you for your letter of October 8, 1986 advising our department that action had been taken to correct deficiencies noted during our compliance inspection.

On October 24, 1986, our department conducted a follow-up inspection of your facility and observed the following:

1. The two (2) 5 gallon laboratory flammable liquid drums were marked with the words Hazardous Waste.
2. Personnel training records have been revised and updated to reflect hazardous waste training as required.
3. Containers were arranged to allow aisle space. The eye-wash station was clear of miscellaneous items.
4. Your inspection logs have been revised to meet permit requirements.
5. On the date of our follow-up inspection a float activated pump was being installed on your VSR sump to prevent the possibility of sump overflow. When the pump is activated, waste from the VSR sump will be pumped into nearby fifty-five (55) gallon drums. According to information provided, the liquid level of these drums will be checked on a daily basis to ensure that over-flow of the drums will not occur. The contents of the drums must be tested for EP-Toxicity/Heavy Metals and depending on laboratory results, must be appropriately marked.

Based on the information provided your facility is found to be in
